Open syntaxes: Towards new engagements with social sciences and humanities
by Sam Griffiths and Vinicius M. Netto

- p. 1 - v

Open syntaxes

‘To know is to know one’s geometry’ – Reflections on the problem of inference in space syntax from the viewpoint of a human geographer
by Sara Westin

- p. 1 - 18

Understanding place holistically: Cities, synergistic relationality, and space syntax
by David Seamon

- p. 19 - 33

After structure: Expression in built form
by Frederik Weissenborn

- p. 34 - 48

Phenomenology of the movement economy: A multilevel analysis
by Lasse Suonperä Liebst

- p. 49 - 60

Roman neighbourhoods by the numbers: A space syntax view on ancient city quarters and their social life
by Hanna Stöger

- p. 61 - 80

Making spatial sense of historical social data
by Nadia Charalambous and Iliana Geddes

- p. 81 - 101
## Contents

**Open syntaxes forum**

- p. 102 - 103  
  The weight of the world  
  *by Nigel Thrift*

- p. 104 - 108  
  Preliminary notes on synergetic inter-representation networks (SIRN), information adaptation (IA) and the city  
  *by Juval Portugali and Hermann Haken*

**Non-thematic section**

- p. 109 - 141  
  Syntax and parametric analysis of superblock patterns  
  *by John Peponis, Chen Feng, David Green, Dawn Haynie, Sung Hong Kim, Qiang Sheng, Alice Vialard and Haofeng Wang*

- p. 142 - 169  
  Urban morphology and syntactic structure: A discussion of the relationship of block size to street integration in some settlements in the Provence  
  *by Lisa Lim, Tianren Yang, Alice Vialard, Chen Feng and John Peponis*

- p. 170 - 191  
  The invention of a new scale – The paradox of size and configuration in American cities  
  *by Mark David Major*

**Book reviews**

- p. 192 - 194  
  Be aware of nuances: Tonkiss, F. (2013), *Cities by Design – The Social Life of Urban Form* - *Reviewed by Frederico de Holanda*

- p. 195 - 197  

**Corrigendum**

- p. 198  
  Corrigendum: ‘Scaling relative asymmetry in space syntax analysis’ - *by Mário Krüger and Andrea Pera Vieira*
